

COMPANY PROFILE

About Deadan Group

About Us

Deadan Group Limited was incorporated to venture into Information and Communication Technology (ICT) business with an inclination towards Information Technology (IT) Services, Consultancy and Training. For the last 4 years we have worked across various fields to serve our clients needs.

Our Mission

Our Mission is to be the world's leading technology partner for SMEs by delivering low cost, high performing solutions to power their businesses.

We believe in doing things that matter and building technological solutions that people want to use.

Our Values

Deadan Group is powered by 3 core values that permeate through everything we do as a company. Our core values:

Build something people want

Innovate with the customer

Flexible on details, stubborn on vision

We are driven by the belief that all the work we do must be meaningful to our customers. That there is no point in building wonderful products that no one finds useful.

We want to become the world's most customer centric company, providing software solutions that power their daily needs. We can only do this by talking to our customers and listening to them. Innovating for them and with them. Their feedback drives everything we build, every single feature.

Our vision remains unaltered, but how we achieve it will likely change. And that is a good thing. We hope it does. But through it all, our vision to work with the customer will always remain steadfast.

Key Competencies

Deadan Group offers **cutting edge, user friendly technology solutions** by combining 4 key competencies:

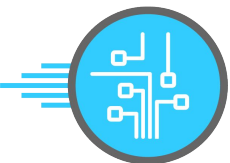

**INDUSTRY
KNOWLEDGE**

**CLIENT-FOCUSED
PRODUCTS**

**RELIABLE
SUPPORT**

**COST
EFFECTIVENESS**

Our Services

Application Development

We design and develop highly customized web and mobile software solutions for our clients using modern technologies.

We offer integration services for Payment systems such as MPESA and Equity Bank, bulk SMS integrations and USSD Application development.

Our development services also include API development and documentation.

Business Intelligence & Data Analytics

Deadan aggregates data collected from a myriad of databases and provides highly customized reports, infographics, screens and dashboards.

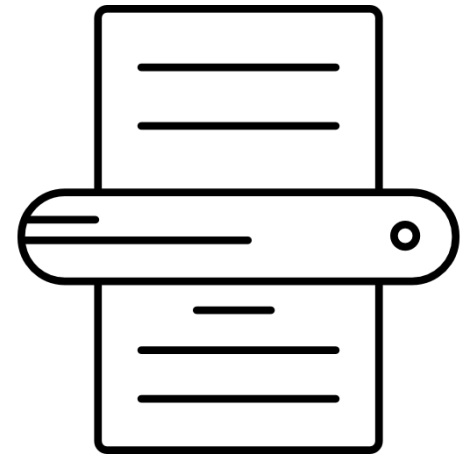

We help in interpreting data by using relevant analytics tools and software. e.g. Ms. Excel, R, MatLab, Qlik, Power BI, Machine Learning, Tableau, SPSS and many other in-house, commercial and other open source applications.

Records Digitization and Bulk Scanning Services

We provide record digitization services to our esteemed clients.

Digitizing a document (scanning it) produces a soft copy of the paper original. Our services also include Back Office Bulleting (Preparation, classification and indexing) and Intelligent Digitization i.e. OCR (Optical Character Recognition). Digitized records can then be domiciled in a less costly location, with new records that are generated being given reference numbers which fit them smoothly into the digital archive.

Audit, Strategy & Information Technology Consultancy

We provide the following consultancy services to our clients: - audit, formulation of strategy, review of IT infrastructure and application systems to ensure they are secure and are suited for the business.

The audits entail a review of the Application Systems, Infrastructure, IT environments, ICT policies and procedures in place to ensure that they are adequate. We also test the suitability of the controls that have been put in place to help in mitigating inherent risks.

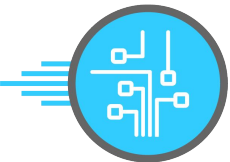

Network and System Infrastructure Solutions

We offer end-to-end IT infrastructure solutions spanning the entire technology lifecycle. From advisory services, infrastructure management, design, build, backup, disaster recovery to technology-as-a-service.

We provide a well-structured, secure, reliable and clean solution to any network, regardless of its size, is essential to any business. We are all-rounder as we cover everything from small peer-to-peer networks to large corporate infrastructures by evaluating a client's environment, making an assessment of actual needs and designing and implementing a best-fit solution

Our Products

dPOS

dPOS is our point of sale solution for your retail and wholesale shops needs.

dPOS allows business to track your sales, stock level and product performance easily. The software can be configured to work with one terminal or as many terminals as are currently available.

Users can add their products and generate barcodes from them. The product SKUs, invoice prefix, receipt prefix and barcode types are highly configurable to ensure as little disruption as possible to customer operations.

The software works with most receipt printers and barcode readers available in the market. This software can be customized to work with shops of all kinds: electronic shops, restaurants, bars, hardwares, wines and spirits and so on.

The logo for dPOS, featuring the letters 'd', 'P', 'O', and 'S' in a bold, dark blue, sans-serif font. The 'd' is lowercase and the others are uppercase.

Mkodi

Mkodi is an online rent collection system.

In a simple 3 step process, users can add their properties, invite their tenants, setup their payment options and that's it.

The system will handle the payment negotiations and the payments go directly to the property owners configured payment options.

Property owners can get detailed insights into which tenant paid when and how often they pay. Supported payment options include MPESA, Credit Card, Paypal and Airtel Money. Mkodi works well on any device that can connect to the Internet.

Salami

Salami is a mobile payment gateway that exposes a uniform payment API to various payment providers including MPESA, Equity Bank, Airtel Money and Paypal.

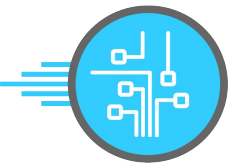

Salami is a proxy payment system that allows you to manage your payments and notifications in one place.

Salami offers the ability to route transactions to unlimited slack integrations and Webhooks based on smart keyword detection. Users can also send fast SMS responses to their customers based on the amount paid, or account paid to.

Salami does all the weighthifting so that you can receive all your payment notifications in a uniform format from all your providers.
